

Case Study Surprise, AZ

Category: Residential

Application: Whole House Treatment

US Case Study

The Challenge: The home was purchased with plans of a complete remodel.

Water hardness can vary widely in Arizona and in some parts of Surprise, reaches almost 17 grains per gallon according to annual water reports.

Since the remodel was to include black sinks and glass shower doors, the homeowner wanted to keep those investments free from scale and looking like new.

The customer knew of Fluid Dynamics Housetron from another home he owned in a previous state and called the company to find out where he could purchase a unit locally for this home in Surprise. Fluid Dynamics was happy to help him work with our local distribution partners.

The Solution: A ½" Housetron was installed on the water main. He made sure to ask his plumber to configure it so that treated water would also be supplied to wash his cars, offering a cleaner, spot free rinse.

Results: The customer is very pleased with his 2nd Fluid Dynamics Housetron purchase and claims that his black sinks and glass shower doors are easy to keep spot and scale free!
